

Poured-in-Place is a 2-layer playground surfacing system consisting of a basemat of 100% post-consumer recycled SBR (Styrene Butadiene Rubber) and polyurethane and a top surface consisting of recycled post-industrial EPDM (Ethylene Propylene Diene Monomer) rubber and polyurethane. It's easily customized to meet the safety, design and aesthetic requirements of any playground.

- Thickness range is between 1-3/4" - 5-1/2" depending upon the fall height of the equipment
- Unlike loose fill, PIP always remains where you need it
- System has a five year warranty. Typical life of system is 8-15 years depending upon use
- Virtually maintenance free
- Due to high recycled content (typically 50% - 75%) customers are able to obtain LEED credits or grant money for their project

Over 70% of all playground injuries occur with falls to the ground. Safety Surfacing is required on all playgrounds by the American Society of Testing Materials (ASTM) and the Consumer Product Safety Commission (CPSC).
